Need to know what the
acreage disturbed actually
is.

Tell him what can be kept
confidential.

Current land use is not
mining, why file a plan?

Vegetative cover - how about an
amount (a number estimate)!

Need plans to control
acid drainage.

Need seed mix

TJS

1. Variance for M-10-14, as worded, appears to just ask for help - not a request for a variance for the performance standards of the rule. This question should be finalized; i.e., if appropriate studies show that revg. is not possible a variance will be issued. However, areas having a soil extract pH of > ____ must be revegetated.
2. A better map is needed. Needs to accurately show all disturbed areas, roads, areas of low pH, show L.S. & S. production areas, denuded areas, structures, etc.

KM # 6/25

- Percent cover is not given - do you have that info, Jim? Could they submit & you verify?
- Test plot ideas should be submitted before approval given. Sounds like the grad student could have some info by end of summer. Some commitment should be made in writing by these folks - all we have now is the info in memo
